Professional Summary:

Total 6 Months of experience as an Android Developer

Professional Project:

Project1:

Title : ISecure Payments
Software/Platform : Eclipse SDK
Role : Developer
Team Size : 3

Summary:

ISecurePayments offers an easy to use, free credit card reader that plugs into a phone or Tablet. ISecurePayments provides customized online payments solutions for merchants.

Customers can pay the merchants through this application and there is a way to take merchants signature with all their credentials and amount of purchase. Customer can pay 'with card' or 'without card'. Payment through ISecurePayments is safe and secure. Here merchant can revert the amount to the customer for certain reasons. We can see the list of daily and monthly transactions, Graphical representation of monthly spent and credit. Merchant can maintain customer contacts in this application. We can add different items to cart before the payment. Customer can get payment receipts to his mail or he can get a print out by enabling printer option in the application.

Recently we included Retail module in iSecurePayments application where scanning functionality is added

*Available in Play Store.

Roles & Responsibilities:

- Understanding the requirements of the current project.
- Designing and developing the connection of the scanner to the device through Bluetooth and get the barcode data from the scanner and display the items accordingly
- Bug Fixing.
